PROFESSIONAL SUMMARY

I'm a frontend developer who's actually shipped production work — including a full e-commerce checkout flow, built end to end. I'm comfortable in React and TypeScript, but I've also spent real time in WordPress, building and customizing themes and plugins for client sites. Along the way I've gotten hands-on with payment gateways, subscriptions, and shipping APIs. I'm looking for a frontend or full-stack role where I can keep building things people actually enjoy using, and take on more responsibility as I go.

TECHNICAL SKILLS

- **Languages:** HTML5, CSS3, JavaScript (ES6+), TypeScript
- **Frontend:** React, React Router, Tailwind CSS
- **CMS & Platforms:** WordPress — theme customization, plugin development, e-commerce setup
- **Integrations:** Payment gateways, subscription billing, shipping & REST APIs
- **Tools:** Git, GitHub, VS Code, Vite, Vercel

EXPERIENCE

Full Stack & WordPress Development Intern

Feb 2026 – May 2026

Ratxen Solutions Private Limited — Gurugram, India (Remote)

- Built and shipped a full-stack e-commerce platform — payment gateway, subscription billing, and shipping APIs, all pulled together into one checkout flow, from design to production.
- Customized WordPress themes and plugins for client sites. Cleaned up code and assets along the way, which helped cut page-load times.
- Kept two live sites running smoothly — MVA Trust (mvatrust.com) and NCPL (ncpl.net.in). Handled content changes, bug fixes, and feature requests as they came up, week to week.
- Wrapped up the 90-day internship with an “Excellent” rating — 6 out of 6, the top score the company gives.

PROJECTS

Recipe Finder — *React, JavaScript, Tailwind CSS, TheMealDB API*

- A responsive recipe search app with debounced search, a card grid, and a detail modal — built to feel fast and stay uncluttered even while pulling from a third-party API.
- Added a client-side favorites system with React state. Also added loading skeletons and clear empty/error states, so things don't fall apart when the API is slow or fails.

[Live Demo](#) | [Source Code](#)

Expense Tracker — *React, TypeScript, Recharts, Tailwind CSS*

- A fully typed expense tracker — dedicated Expense and Category interfaces, zero use of 'any', so the codebase stays clean and self-explanatory.
- Category-level spending charts with Recharts, plus date-range and category filters and a running total, so you always know where you stand.

Portfolio Website — *React, TypeScript, Vite, CSS*

- An interactive, terminal-styled portfolio, rebuilt in React and TypeScript with Vite. Has a custom command interpreter and full keyboard navigation, and it's deployed on GitHub Pages — a genuine showcase piece, not another templated site.

EDUCATION

Bachelor of Computer Applications (BCA)

2026

PES University

CERTIFICATION

- Internship Completion Certificate — Full Stack Development & Digital Marketing, Ratxen Solutions Private Limited (2026)
